MR SAFE TROLLEY - 4 DRAWERS

ENCLARA MEDICAL

CRM 001 4C

Our **CRM 001 4C** non-magnetic trolley is designed for the transport and distribution of medicines, dressings, instruments and various materials in all areas of MRI sites. It is made using only non-metallic, non-magnetic and electrically non-conductive materials.
For this reason, according to the harmonized standard **CEI EN 62570:2016-01** it can be labeled as **MR Safe**, the highest standard of compatibility with **MR** environments.

FRAME

The frame is entirely made of PVC, added with titanium dioxide. In addition to improving its aesthetic appearance (glossy white, resistant to UV rays, it does not yellow over time), this increases mechanical resistance and has specific antibacterial properties. Its parts are coupled by a chemical welding process, so the structure behaves as a single piece, solid, rigid and resistant.

CHEST OF DRAWERS

The drawer unit, made entirely of plastic, is equipped with 4 transparent drawers of 20 liters with ergonomic opening and stop to avoid accidental total extraction. Each drawer has a load capacity of 20 kg. The drawers can be equipped with provision for security seals.

SHELF

The top shelf is made of radiolucent HPL and is removable for easy sanitization. The shelf can withstand a load of up to 25 kg.

The trolley is equipped with 4 large diameter swivel castors made of synthetic material. The rear castors have brakes.

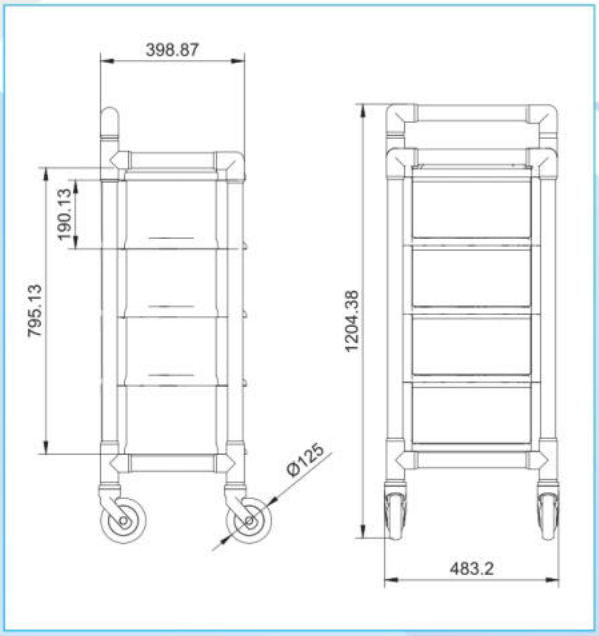

On request, the trolley is also available in the MR Conditional version for MR stations up to 3 Tesla, with plastic castors and brass parts.
